Details of approval
The syllabus was approved by Study programmes board, Faculty of Science on 2020-06-08 to be valid from 2020-06-08, spring semester 2021.

General Information
The course is an elective course for second-cycle studies for a Degree of Master of Science (120 credits) in mathematics.

Language of instruction: English

Main field of studies          Depth of study relative to the degree requirements
Mathematics                   A1N, Second cycle, has only first-cycle course/s as entry requirements

Learning outcomes
The main goal of the course is to introduce students to the principles and techniques of topology, and to enable them to apply these techniques in different mathematical settings.

Knowledge and understanding
After completing the course, the student should be able to:

• give a detailed account of the fundamental topological concepts included in the course,
• identify the most important theorems in the course and present their proofs,
• explain the theory behind the methods introduced in the course,
• give examples of a variety of topological spaces, and explain their relevance in different areas of mathematics,
• recognise the topological structures in a range of mathematical problems.

This is a translation of the course syllabus approved in Swedish
**Competence and skills**

After completing the course, the student should be able to:

- critically and systematically integrate knowledge from different areas of mathematics to analyse and solve complex problems using topological methods,
- independently and creatively identify, formulate and solve relevant problems within the framework of the course.

**Judgement and approach**

After completing the course, the student should be able to:

- argue for the important role of topological structures in different areas of research in mathematics and its applications,
- identify the own need for further knowledge and take responsibility for further knowledge development.

**Course content**

The course treats:

- topological spaces and metric spaces with examples, product topologies, continuity of functions,
- connectedness, completeness, and compactness, including the Arzela-Ascoli Theorem,
- examples of applications and topological structures,
- examples of metric and topological spaces relevant in other areas of mathematics, such as normed spaces and Hilbert spaces.

**Course design**

The teaching consists of lectures and seminars. Homework assignments are included in the course.

**Assessment**

The examination consists of a written examination and a corresponding oral examination at the end of the course. The oral examination is only given to those students who have passed the written examination. Completed homework assignments can give a certain amount of bonus points that can be counted towards the written examination; this will be specified at the start of the course.

Students who fail the regular written and oral examination, respectively, are offered a re-examination shortly thereafter.

The examiner, in consultation with Disability Support Services, may deviate from the regular form of examination in order to provide a permanently disabled student with a form of examination equivalent to that of a student without a disability.

Subcourses that are part of this course can be found in an appendix at the end of this document.
Grades

Marking scale: Fail, Pass, Pass with distinction.
To pass the course it is required to pass the written examination and the oral examination. The grade Pass with distinction requires in addition that the total number of points obtained in the written and the oral examination is at least 75% of the maximum total number of points. The maximum numbers of points that can be obtained in the written and the oral examinations are weighted three to one.

Entry requirements

For admission to the course, English 6/B is required as well as at least 90 credits in mathematics including knowledge corresponding to the course MATB24 Linear Analysis 7.5 credits.

Further information

The course may not be included in a degree together with MATM16 Topology 7.5 credits.
Subcourses in MATM36, Mathematics: Topology

Applies from V21

2101 Written Examination, 5,0 hp
   Grading scale: Fail, Pass

2102 Oral Examination, 2,5 hp
   Grading scale: Fail, Pass
