Course content
This course introduces the student to central traditions in organization and leadership studies. The aim is to equip students with a basic set of concepts and perspectives needed to analyse and understand organizational phenomena and make sense of challenges managers and workers might face. The following theoretical themes (among others) are included: Motivation, culture, control, leadership and organizational design.

Furthermore, the course seeks to develop analytical (problem-identifying) and decision making (problem-solving) skills required to manage complex situations, as well as train students in argumentation and presentation skills. An important pedagogical idea of the course is to make sure that theories are applied to organizational practice. Case studies will be the main tool to accomplish this. In order to address the complexity of organizational issues, various perspectives will be adopted when organizational practice is discussed, and emphasis will be put on reflective usage of theories.

Course design
The primary classroom activities are seminars, which are built upon active student participation in terms of discussions and presentations in various forms. To support individual studies preceding the seminars, online lectures and quizzes are provided, in addition to a textbook well suited for self-study. Furthermore, students are given group assignments to work on in multicultural teams, as means to prepare for the seminars.

Assessment
The course will be examined by means of a written examination undertaken at the end of the course. Students will also be examined by means of their performance during the seminars. Attendance at the seminars will be compulsory.

Subcourses that are part of this course can be found in an appendix at the end of this document.
