Course content

Climate change has emerged as one of the defining issues for the 21st century. What started as a matter of scientific inquiry in the nineteenth century, and became a battleground for intergovernmental negotiations in the 1990s, is now written through the contemporary social and political world. The course moves away from studying climate change as a 'single issue' to instead approach it as a 'condition' affecting the ways in which multiple economies and forms of social relations emerge.

This course explore the politics of climate change across a multiple set of sites ranging from the UN, the state and the city, to systems of infrastructure, social and cultural practices. This could impliesy a closer engagement with issues such as public and private low carbon road-maps, urban designs for electric mobility, the low carbon

home, the carbon conscious individual and the climate refugee. These sites are examined with the help of different conceptual and theoretical perspectives from various fields of political science, among them international relations, policy studies, comparative politics and critical social and political thought. Through fieldwork and methods of authentication the course helps the students to grasp how climate change rearticulate fundamental concerns of political science, such as social change, power, democracy, and authority, and . social change.

Course design

The course consists of a series of lectures, seminars and field visits, seminars and field visits. Participation in all seminars is mandatory.

Assessment

Examination is based on assignments throughout the course, in both written and oral form, as well as a final course paper. In addition to the regular examinations, two extra examinations will be organised each time the course is offered.
