

Faculty of Medicine

LÄKM05, Degree Project 2, 30 credits

Examensarbete 2, 30 högskolepoäng

Second Cycle / Avancerad nivå

Details of approval

The syllabus is an old version, approved by The Medical Degree Programme Board on 2021-04-07 and was valid from 2021-08-30, autumn semester 2021.

General Information

The course makes up semester 10 of the medical degree programme and is compulsory.

Mainly Swedish, but English is used in the required reading, the written papers and the oral presentations.

Main field of studies

Medicine

Depth of study relative to the degree requirements

A2E, Second cycle, contains degree project for Master of Arts/Master of Science (120 credits)

Learning outcomes

Knowledge and understanding

For a Pass on the course, the students shall be able to

- provide a substantially specialised account of the current state of knowledge and current research within a delimited area of the medical field

- provide a substantially specialised account of the methods applicable in a delimited area of the medical field and for the potential and limitations of the methods

Competence and skills

For a Pass on the course, the students shall be able to

- adopt systematic strategies to independently seek, select and assess sources, and use information from the literature to execute a degree project and engage in discussions with fellow students
- execute a project based on a project plan, collect data, analyse results and independently compile and critically assess the importance and limitations of the results based on the issue and method
- discuss research methods applicable to the area of specialisation, the potential and limitations of the methods, and argue for the choice of methods of relevance to the degree project
- independently identify and pursue a discussion of principles of research ethics of specific relevance to their own degree project and those of fellow students
- identify the potential need of further knowledge within the area of specialisation
- plan and independently write an academic paper in English and a popular science summary of the paper in Swedish
- independently provide an oral account and discussion in English of their degree project and the knowledge and arguments on which it is based in dialogue with both researchers and fellow students
- adopt a scientific approach to critically review the degree project of fellow students and provide constructive feedback in spoken and written English

Judgement and approach

For a Pass on the course, the students shall be able to

- independently make assessments informed by aspects of research ethics with specific relevance to their own degree project
- assess their own need of further knowledge and take responsibility for their knowledge development in the area of specialisation

Course content

The aim of the degree project is to provide students with the opportunity to broaden and specialise their knowledge in areas of their interest and, as a consequence, train them in seeking, critically reviewing and compiling medical research information from different sources and, where relevant, through reviewing patient records and registers, and/or conducting experiments. In semester 9, prior to the actual course period, the students are to formulate a research issue based on a general aim and use it to write a project plan. In the course, the student is to execute an experimental or clinical project based on the issue, or a meta-analysis or systematic literature review in cases where a meta-analysis is not formally possible, and present the project in an

academic paper.

Course design

Execution of an individual (not group) project in the form of a supervised research study. The project plan must be approved by the course director before the project is commenced. The project can be carried out in Sweden or abroad. If the project is to be executed outside Sweden or if the appropriate academic expertise is not available where the study is to be carried out, a supervisor must also be appointed at the Faculty of Medicine in Lund or at Region Skåne.

Assessment

Written report in the form of an academic paper, which is to include a summary (abstract) in English and a popular science summary in Swedish. The students are to present and defend their papers orally in English and also to critically review a fellow student's paper in English at the defence seminar.

The examiner, in consultation with Disability Support Services, may deviate from the regular form of examination in order to provide a permanently disabled student with a form of examination equivalent to that of a student without a disability.

Subcourses that are part of this course can be found in an appendix at the end of this document.

Grades

Marking scale: Fail, Pass.

Entry requirements

Passed courses (all assessed components) up to and including semester 7 of the medical degree programme.

Passed project plan (in semester 9).

Completed course Clinical Medicine 4 (semester 9).

Subcourses in LÄKM05, Degree Project 2

Applies from H21

- 2101 Portfolio, 1,5 hp
Grading scale: Fail, Pass
- 2102 Degree Project, 25,5 hp
Grading scale: Fail, Pass
- 2103 Oral presentation, 2,0 hp
Grading scale: Fail, Pass
- 2104 Opposition, 1,0 hp
Grading scale: Fail, Pass
