

School of Economics and Management

NEKG31, Economics: Econometrics, 7.5 credits

Nationalekonomi: Ekonometri, 7,5 högskolepoäng

First Cycle / Grundnivå

Details of approval

The syllabus is an old version, approved by The Board of the Department of Economics on 2011-06-07 and was valid from 2011-06-07, autumn semester 2011.

General Information

This is a single subject intermediate course that can be a part of all specialisations within economics. The course is also an obligatory sub-course within NEKG11 'Economics: Level 2'. The course is optional within a number of undergraduate programmes at Lund University.

Language of instruction: Swedish

Teaching is in Swedish. (In some semesters the course can be taught in English, see the appropriate application catalogue).

Main field of studies

Economics

Depth of study relative to the degree requirements

G1F, First cycle, has less than 60 credits in first-cycle course/s as entry requirements

Learning outcomes

1. Knowledge and understanding

Students shall be able to:

- collect and analyse data,
- account for basic statistical concepts,
- explain how the relationship between economic variables can be analysed using statistical regression analysis,
- describe the different aspects of regression analysis
- derive and formulate testable economic hypotheses,
- give both a statistical and an economic interpretation of the results of a regression analysis,
- orientate themselves in more advanced econometrics methods,

- generalise their knowledge to econometric problems that haven't been treated during the course,
- understand relevant empirical and econometric research.

2. Skills and abilities

Students shall have the ability to independently:

- apply basic statistical methods,
- apply regression analysis to economic problems,
- test economic hypotheses,
- evaluate whether the assumptions being used in a regression analysis are reasonable,
- implement regression analysis using econometric software.

3. Applying knowledge and making judgements

Students shall be able to give an account of and discuss their econometric abilities. Students shall have developed the ability to pursue further studies in the subject and should be able to search for and evaluate information with a high degree of independence. Students shall also have developed the ability to individually write an empirically orientated essay.

Course content

This course starts with an introduction to descriptive statistics, probability theory and inference. Thereafter, the course treats problems connected with establishing and quantifying the relationship between different economics variables as well as basic econometric methodology. The main focus is statistical regression analysis, but more advanced methods in, for example, time series analysis are also considered. Another important part of the course is the practical applications in the form of computer exercises, using applications in microeconomics, macroeconomics and financial economics. The computer exercises are carried out using econometric software on a PC.

No specific gender perspective is adopted in this course.

Course design

1. Teaching: Tuition consists of lectures and computer exercises.

Assessment

1. Examination: Written exams take place at the end of the course. There will be further opportunities for examination close to this date. The computer exercises will be graded, and the marks carried forward to examinations taken the same term. Other forms of examination may be used to a limited extent.

2. Limitations on the number of examination opportunities: –

The University views plagiarism very seriously, and will take disciplinary action against students for any kind of attempted malpractice in connection with examinations and assessments. Plagiarism is considered to be a very serious academic offence. The penalty that may be imposed for this, and other unfair practices in examinations or assessments, includes suspension from the University for a specified period.

Subcourses that are part of this course can be found in an appendix at the end of this document.

Grades

Marking scale: Fail, E, D, C, B, A.

1. Grading: The official grading scale is A, B, C, D, E and Fail.
2. Weighting grades from different parts of the course: –
3. Grading scales for different parts of the course: –

Entry requirements

At least 20 ECTS-credits from the introductory course in economics, of which at least 7.5 ECTS-credits in microeconomics are needed for admission till all intermediate courses in economics.

Further information

1. Transitional regulations: This course replaces NEKB23 "Econometrics".
2. Limitations in the period of validity: –
3. Limitations: This course may not be included in the same degree as the sub-course in econometrics within NEKA21 "Economics: Level 2", the sub-course in econometrics within NEK231 "Economics, General Course", the sub-course in econometrics within NEKG11 "Economics: Level 2", the course NEKB26 "Quantitative Methods", the course NEKB43 "Econometrics", the course NEK613 "Quantitative Methods", the course NEK615 "Econometrics B/C" or the course NEKB23 "Econometrics".
4. Similar courses: This course has the same content as the sub-course in econometrics within NEKG11 "Economics: Level 2".
5. Limitations in renewed examination: –
