

School of Economics and Management

NEKN34, Economics: Time Series Analysis, 7.5 credits

Nationalekonomi: Tidsserieanalys, 7,5 högskolepoäng

Second Cycle / Avancerad nivå

Details of approval

The syllabus is an old version, approved by The Board of the Department of Economics on 2011-06-07 and was valid from 2011-06-07, autumn semester 2011.

General Information

This is a single subject master course in economics. The course is either obligatory or optional within a number of master programmes at Lund University.

Language of instruction: English

Teaching is in English. (Teaching may be in Swedish if all registered students have a good knowledge of Swedish).

Main field of studies

Economics

Depth of study relative to the degree requirements

A1N, Second cycle, has only first-cycle course/s as entry requirements

Learning outcomes

1. Knowledge and understanding

Students shall:

- have a deeper understanding of univariate time series analysis in levels,
- understand how unit root hypotheses are formulated and tested in univariate models,
- have an understanding of multivariate time series analysis in levels,
- have a deeper understanding of cointegration analysis,
- be able to formulate and test the hypothesis of cointegration in both single equation and multivariate time series models,
- be able to formulate and test hypotheses concerning the cointegration vector,
- have an understanding of the analysis of either volatility in a univariate time series or unit roots and cointegration in panel data models,

- be able to generalise their knowledge to economic problems that haven't been treated during the course,
- be able to understand relevant empirical and econometric research.

2. Skills and abilities

Students shall have the ability to independently:

- apply advanced econometric tools to economic problems using time series,
- choose a suitable time series model to analyse a specific problem,
- evaluate whether the assumptions made by the chosen model are reasonable,
- apply rational modelling strategies even when basic assumptions must be rejected,
- implement econometric analyses of time series using econometric software,
- give an account of and discuss their abilities within time series analysis and the appropriateness of different time series methods for the analysis of economic problems.

3. Applying knowledge and making judgements

Students shall have developed the ability to pursue further studies in the subject and should be able to search for and evaluate information with a high degree of independence. Students shall also have developed the ability to individually write an empirically orientated essay at the master level using time series methods.

Course content

The course gives an introduction to basic concepts within time series analysis. The univariate analysis of time series in this course is based upon ARMA/ARIMA and ARCH-/GARCH models. Multivariate time series analysis is based on VAR models. Nonstationary time series are analysed using unit root tests, cointegration methods and VEC models. Theoretical studies are interwoven with practical applications in financial economics and macroeconomics.

No specific gender perspective is adopted in this course.

Course design

1. Teaching: Tuition consists of lectures and computer exercises

Assessment

1. Examination: Written exams take place at the end of the course. There will be further opportunities for examination close to this date. The computer exercises will be graded, and the marks carried forward to examinations taken the same academic year. Other forms of examination may be used to a limited extent.

2. Limitations on the number of examination opportunities: –

The University views plagiarism very seriously, and will take disciplinary action against students for any kind of attempted malpractice in connection with examinations and assessments. Plagiarism is considered to be a very serious academic offence. The penalty that may be imposed for this, and other unfair practices in examinations or assessments, includes suspension from the University for a specified period.

Subcourses that are part of this course can be found in an appendix at the end of this document.

Grades

Marking scale: Fail, E, D, C, B, A.

1. Grading: Grade (Definition), Points or percentage out of maximum points, Characteristic

A (Excellent), 85–100, A distinguished result that is excellent with regard to theoretical depth, practical relevance, analytical ability and independent thought.

B (Very good), 75–84, A very good result with regard to theoretical depth, practical relevance, analytical ability and independent thought.

C (Good), 65–74, The result is of a good standard with regard to theoretical depth, practical relevance, analytical ability and independent thought.

D (Satisfactory), 55–64, The result is of a satisfactory standard with regard to theoretical depth, practical relevance, analytical ability and independent thought.

E (Sufficient), 50–54, The result satisfies the minimum requirements with regard to theoretical depth, practical relevance, analytical ability and independent thought, but not more.

U (Fail), 0–49, The result does not meet the minimum requirements with regard to theoretical depth, practical relevance, analytical ability and independent thought.

Students have to receive a grade of E or higher in order to pass a course.

2. Weighting grades from different parts of the course: –

3. Grading scales for different parts of the course: –

Entry requirements

Students who have been admitted to a Master Programme in Economics, a Master Program in Finance or the Master Programme in Economic Research Methods, and who have taken the courses NEKN31 "Advanced Econometrics" or NEKN82 "Empirical Finance", are eligible to take this course. For other students at least 75 ECTS-credits in economics are required. These must include 15 ECTS-credits at the advanced level, including the courses NEKN31 "Advanced Econometrics", NEKN82 "Empirical Finance" or an equivalent course in econometrics at the advanced level.

Further information

1. Transitional regulations: This course replaces NEK712 "Time Series Analysis".

2. Limitations in the period of validity: –

3. Limitations: This course may not be taken by students who have passed NEK712 "Time Series Analysis".

4. Similar courses: –

5. Limitations in renewed examination: –
